X20 Upgrade Instructions

BACKGROUND:

Version 2.3.7.1 is the latest version of X20 software and is required for NH3 or Liquid Section Control. The following instructions are to download and install a basic version of **2.3.7.1**.

If a more comprehensive version is required please contact your Bourgault dealer, this may be required to correct issues due to corrupted files.

DOWNLOAD PROCEDURE:

It is recommended that a quality USB stick with no other files installed is used for X20 software upgrades.

3. Transfer the file to a blank thumb drive for UPGRADING the X20. If your computer has Windows 7 or newer you will have copy the Lynx folder and UPGRADE.EXE then paste them on the first page of the USB stick and skip to SRC SETTINGS BACK-UP. If you are using an older version go to step 4. (With either method you must end up with a Lynx folder and an UPGRADE.EXE on the first page of the USB stick.)

4. Use the EXTRACT function to transfer the required files to a blank thumb drive

5. Perform the steps shown on the following pages and verify a successful Upgrade.

SRC SETTINGS BACK-UP: The upgrade should not overwrite the SRC configuration files, but to ensure your settings are backed-up please do the following:

- Using Windows Explorer go to "C:\Lynx\Programs\LYNXSRC\" and copy two files - SRC.INI and SRCRUN.INI – either to a separate thumbdrive or to the desktop.
- (2) If an overwrite does occur during the upgrade, just overwrite the back-up files into the directory listed above.

ALTERNATE METHOD: Some choose to take a photo of each tab in the **OPTIONS** section of the X20.

X20 UPGRADE:

- 1. Insert USB stick in one of the X20 USB ports.
- 2. Press **STOP** when at the screen as below, then press **UPGRADE**.

3. Next press Start Upgrade.

4. Select **Yes to All** and the program will update automatically.

5. Verify ALL user settings once the Upgrade has be completed.

6. Verify that it has version 2.3.7.1
